Chapter 1

Logitech Wingman 3D Class Driver for QNX Hierarchical Index

1.1 Logitech Wingman 3D Class Driver for QNX Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Wingman3D	7
wingman_data	12
wingman_device	14
wingman_report	15

Chapter 2

Logitech Wingman 3D Class Driver for QNX Class Index

2.1 Logitech Wingman 3D Class Driver for QNX Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Wingman3D (The class Wingman3D provides an interface to the following Logitech (Vendor ID: 0x046D) USB HID compliant joysticks:)	7
wingman_data (A structure for holding wingman joystick data)	12
wingman_device (A structure for wingman devices (for driver internal use))	14
wingman_report (A structure for device reports (for driver internal use))	15

Chapter 3

Logitech Wingman 3D Class Driver for QNX File Index

3.1 Logitech Wingman 3D Class Driver for QNX File List

Here is a list of all files with brief descriptions:

Wingman3D.hpp	17
-------------------------------	----

Chapter 4

Logitech Wingman 3D Class Driver for QNX Class Documentation

4.1 Wingman3D Class Reference

The class [Wingman3D](#) provides an interface to the following Logitech (Vendor ID: 0x046D) USB HID compliant joysticks:

```
#include <Wingman3D.hpp>
```

Public Member Functions

- [Wingman3D](#) (int devNum=0)
- [~Wingman3D](#) ()
- int [getX](#) () const
- int [getMaxX](#) () const
- int [getY](#) () const
- int [getMaxY](#) () const
- int [getTwist](#) () const
- int [getMaxTwist](#) () const
- int [getNumButtons](#) () const
- bool [isButtonPressed](#) (int button) const
- int [getSliderValue](#) () const
- int [getMaxSliderValue](#) () const
- int [getHatSwitchStatus](#) () const
- bool [isStatusOk](#) () const
- char * [getStatusMessage](#) () const
- void [printDeviceInfo](#) (int verbosity=1) const

Protected Member Functions

- [wingman_data_t](#) [getWingmanData](#) () const
- [wingman_data_t](#) [getWingmanMaxData](#) () const

4.1.1 Detailed Description

The class [Wingman3D](#) provides an interface to the following Logitech (Vendor ID: 0x046D) USB HID compliant joysticks:

- Wingman Extreme 3D Digital (Product ID: 0xC212)
- Force3D (Product ID: 0xC283) (no force feedback support)
- Extreme 3D Pro (Product ID: 0xc215)

To use the joystick please ensure that the USB manager (devu-uhci or devu-ohci) and manager for HID devices (io-hid) are running. Your application will also need to be linked with the HID library libhiddi.so and the library created by this class. You will need to be root to use this class. Here are the commands to start the device managers (as root) :

```
/sbin/devu-uhci & (or /sbin/devu-ohci &)
/sbin/io-hid &
mount -Tio-hid devh-usb.so &
```

Example Program:

```
//=====
// Wingman3D.t.cpp : Example program for Logitech Wingman HID Joystick
//
// Author          : Vilas Kumar Chitrakaran <cvilas@ces.clemson.edu>
// Date            : March 2, 2004
// Compiler         : GNU GCC 2.95.3qnx-nto
// Operating System : QNX Momentics 6.2.1
//=====

#include "Wingman3D.hpp"
#include <stdio.h>
#include <stdlib.h>
#include <unistd.h>

int main()
{
    Wingman3D joystick(0);

    if( !joystick.isStatusOk() ) {
        fprintf(stderr, "%s\n", joystick.getStatusMessage());
        return EXIT_FAILURE;
    }
    sleep(1);
    joystick.printDeviceInfo(3);

    while(1)
    {
        fprintf(stdout, "\nx: %03d y: %03d z: %03d slide: %03d hat: %03d buttons: ",
            joystick.getX(), joystick.getY(), joystick.getZ(),
            joystick.getSliderValue(), joystick.getHatSwitchStatus());

        for(int i = 1; i < joystick.getNumButtons(); i++)
            if( joystick.isButtonPressed(i) )
                fprintf(stdout, "%01d ", i);

        if( !joystick.isStatusOk() )
            return -1;
    }

    return EXIT_SUCCESS;
}
```

4.1.2 Constructor & Destructor Documentation

4.1.2.1 Wingman3D::Wingman3D (int *devNum* = 0)

The default constructor. Establishes connection with the HID driver.

Parameters:

devNum The address of the joystick device to connect to (default = 0).

4.1.2.2 Wingman3D::~~Wingman3D ()

The default destructor disconnects from the HID driver and cleans up.

4.1.3 Member Function Documentation

4.1.3.1 int Wingman3D::getX () const

Returns:

The X position

4.1.3.2 int Wingman3D::getMaxX () const

Returns:

The maximum output from X axis.

4.1.3.3 int Wingman3D::getY () const

Returns:

The Y position

4.1.3.4 int Wingman3D::getMaxY () const

Returns:

The maximum output from Y axis.

4.1.3.5 int Wingman3D::getTwist () const

Returns:

The twist handle position.

4.1.3.6 int Wingman3D::getMaxTwist () const

Returns:

The maximum output from twist axis.

4.1.3.7 int Wingman3D::getNumButtons () const**Returns:**

The number of programmable buttons available

4.1.3.8 bool Wingman3D::isButtonPressed (int *button*) const**Returns:**

true if button *button* is pressed, else false

4.1.3.9 int Wingman3D::getSliderValue () const**Returns:**

The slider/throttle position. Range [0 - 255].

4.1.3.10 int Wingman3D::getMaxSliderValue () const**Returns:**

The maximum output from slider.

4.1.3.11 int Wingman3D::getHatSwitchStatus () const**Returns:**

A value indicating position of the hat switch. Range [1 - 8].

4.1.3.12 bool Wingman3D::isStatusOk () const**Returns:**

true if no error, else false.

4.1.3.13 char* Wingman3D::getStatusMessage () const**Returns:**

A string carrying current status of the device. This string also carries error messages when [isStatusOk\(\)](#) returns false.

4.1.3.14 void Wingman3D::printDeviceInfo (int *verbosity* = 1) const

Print information about the device to stdout. Higher values of *verbosity* mean more detailed information.

4.1.3.15 [wingman_data_t](#) Wingman3D::getWingmanData () const [protected]**Returns:**

The whole data structure for device with current joystick data

4.1.3.16 [wingman_data_t](#) Wingman3D::getWingmanMaxData () const
[protected]

Returns:

The whole data structure for device with max limits for joystick data

The documentation for this class was generated from the following file:

- [Wingman3D.hpp](#)

4.2 wingman__data Struct Reference

A structure for holding wingman joystick data.

```
#include <Wingman3D.hpp>
```

Public Attributes

- bool [statusOk](#)
'true' if device status is OK.
- char [statusMessage](#) [80]
Char buffer to hold device status message.
- int [x](#)
X axis data.
- int [y](#)
Y axis data.
- int [twist](#)
Z axis data.
- int [buttons](#)
Button status data.
- int [slider](#)
Slider axis data.
- int [hatSwitch](#)
Hat switch position data.

4.2.1 Detailed Description

A structure for holding wingman joystick data.

4.2.2 Member Data Documentation

4.2.2.1 bool [wingman__data::statusOk](#)

'true' if device status is OK.

4.2.2.2 char [wingman__data::statusMessage](#)[80]

Char buffer to hold device status message.

4.2.2.3 int wingman_data::x

X axis data.

4.2.2.4 int wingman_data::y

Y axis data.

4.2.2.5 int wingman_data::twist

Z axis data.

4.2.2.6 int wingman_data::buttons

Button status data.

4.2.2.7 int wingman_data::slider

Slider axis data.

4.2.2.8 int wingman_data::hatSwitch

Hat switch position data.

The documentation for this struct was generated from the following file:

- [Wingman3D.hpp](#)

4.3 wingman__device Struct Reference

A structure for wingman devices (for driver internal use).

```
#include <Wingman3D.hpp>
```

Public Attributes

- [wingman_data_t data](#)
device current data.
- [wingman_data_t max_data](#)
max limits on data fields.
- [wingman_report_t * report](#)
- [hidd_device_instance_t * device_instance](#)

4.3.1 Detailed Description

A structure for wingman devices (for driver internal use).

4.3.2 Member Data Documentation

4.3.2.1 [wingman_data_t wingman_device::data](#)

device current data.

4.3.2.2 [wingman_data_t wingman_device::max_data](#)

max limits on data fields.

4.3.2.3 [wingman_report_t* wingman_device::report](#)

4.3.2.4 [hidd_device_instance_t* wingman_device::device_instance](#)

The documentation for this struct was generated from the following file:

- [Wingman3D.hpp](#)

4.4 wingman_report Struct Reference

A structure for device reports (for driver internal use).

```
#include <Wingman3D.hpp>
```

Public Attributes

- `hidd_report_instance` * [creport_instance](#)
- `hidd_report` * [creport](#)
- `_uint16` * [cbtnbuf](#)
- `_uint32` [dev_no](#)

4.4.1 Detailed Description

A structure for device reports (for driver internal use).

4.4.2 Member Data Documentation

4.4.2.1 `struct hidd_report_instance*` [wingman_report::creport_instance](#)

4.4.2.2 `struct hidd_report*` [wingman_report::creport](#)

4.4.2.3 `_uint16*` [wingman_report::cbtnbuf](#)

4.4.2.4 `_uint32` [wingman_report::dev_no](#)

The documentation for this struct was generated from the following file:

- [Wingman3D.hpp](#)

Chapter 5

Logitech Wingman 3D Class Driver for QNX File Documentation

5.1 Wingman3D.hpp File Reference

```
#include <sys/hiddi.h>
```

Classes

- struct `wingman_data`

A structure for holding wingman joystick data.

- struct `wingman_report`

A structure for device reports (for driver internal use).

- struct `wingman_device`

A structure for wingman devices (for driver internal use).

- class `Wingman3D`

The class `Wingman3D` provides an interface to the following Logitech (Vendor ID: 0x046D) USB HID compliant joysticks:.

Typedefs

- typedef `wingman_data` `wingman_data_t`
- typedef `wingman_report` `wingman_report_t`
- typedef `wingman_device` `wingman_device_t`

5.1.1 Typedef Documentation

5.1.1.1 typedef struct [wingman_data](#) [wingman_data_t](#)

5.1.1.2 typedef struct [wingman_report](#) [wingman_report_t](#)

5.1.1.3 typedef struct [wingman_device](#) [wingman_device_t](#)
